Babasaheb Ambedkar Technological University)

DEPARTMENT OF COMPUTER SCIENCES AND ENGINEERING

This is to certify that,

Mr. Wasamkar Yashraj Santosh	(C58)
Mr. Shinde Shreyas Sunil	(C60)
Mr. Sutar Shubham Mahadev	(C61)
Mr. Salunkhe Varad Babaso	(C63)
Mr. Omkar Rahul Desai	(C71)

Studying in SY Computer Science has successfully completed the Mini Project Report on
“LIVESTOCK DISEASE DETECTION SYSTEM” under the guidance and
supervision of Mrs. P. P. Langde. during the academic year 2026-2027 Semester V. This is a
part of fulfillment of the requirement for award of degree of the Bachelor of Technology in
Computer Science Engineering.

Mrs. P. P. Langde.

Dr. B. B. Sangame.
I/C Principal
SITCOE

ACKNOWLEDGEMENT

We would like to express our deep and sincere gratitude to our Guide **Mrs. P. P. Langde**. Department of Computer Science and Engineering, for guiding us to accomplish this project work. It was our privilege and pleasure to work under her valuable guidance. We are indeed grateful to his for providing helpful suggestion, from time to time. Due to his constant encouragement and inspiration we are able to present this project.

We express our deep gratitude to **Dr. S. S. Gurav** Head of Computer Science and Engineering Department, for his valuable guidance and constant encouragement.

We are very much thankful to **Dr. B. B. Sangame** I/C Principal, Sharad Institute of Technology College of Engineering, Yadav-Ichalkaranji, for providing all the necessary facilities to carry out project work.

Last but not least we are thankful to our parents for their moral as well as financial support.

ABSTRACT

Livestock diseases can affect animal health and farm productivity. This project presents a web-based system for preliminary screening of cattle images using a MobileNetV2-based convolutional neural network and transfer learning. The model classifies uploaded images into six categories: foot-and-mouth disease, infectious bovine keratoconjunctivitis, lumpy skin disease, mastitis, ringworm, and healthy. The dataset is organized into training, validation, and test subsets, and the images are resized and preprocessed before being supplied to the model.

The Flask application displays the predicted class, confidence score, and a primary recommendation. SQLite is used to store prediction history for later review. An earlier model evaluation reported 80.65% test accuracy. However, exact duplicate images were found across the dataset subsets, so the data should be cleaned and the model reevaluated before this accuracy is treated as a final result. The system is intended to support preliminary image-based screening and does not replace diagnosis or treatment advice from a veterinarian.

TABLE OF CONTENTS

Main Section	Subsection	Title	Page
1		INTRODUCTION	1
2		LITERATURE REVIEW	3-4
	2.1	2023: Lumpy Skin Disease Detection Using ResNet-50	
	2.2	2024: Cattle Disease Detection Using VGG16 CNN	
	2.3	2025: LSD Detection Using Deep Feature Extraction	
	2.4	2025: Mobile Diagnosis of Foot-and-Mouth Disease	
3		PROBLEM STATEMENT	5
4		OBJECTIVES	6
	4.1	To develop a livestock disease screening system	
	4.2	To classify cattle images into supported categories	
	4.3	To display the predicted category and confidence score	
	4.4	To provide primary recommendations through a web interface	
5		SYSTEM ARCHITECTURE	7
6		METHODOLOGY	8-10
	6.1	Dataset Preparation	
	6.2	Image Preprocessing	
	6.3	Data Augmentation	
	6.4	MobileNetV2-Based CNN Model	
	6.5	Model Training and Validation	
	6.6	Model Evaluation and Saving	
	6.7	Image Prediction Using the Web Application	
	6.8	Result and Recommendation Display	
	6.9	Prediction History Database	
7		DATASET FEATURES AND EVALUATION METRICS	11-12
	7.1	Dataset Features	
	7.2	Evaluation Metrics	

8		SYSTEM REQUIREMENTS	13
9		RESULTS	14- 16
	9.1	Home Page	
	9.2	Image Upload Page	
	9.3	Disease Prediction Result	
	9.4	Healthy Prediction Result	
	9.5	Prediction History Page	
10		CONCLUSION	17
11		FUTURE SCOPE	18
